

What can Regina Chains in DK (Delrin with Kevlar) do for your conveying applications?

Regina in conjunction with DuPont has created DK belts and chains made of Delrin and Kevlar which have the exceptional properties of excellent wear resistance and a very low coefficient of friction. The Regina product provides a solution for those conveying applications where minimal or no lubrication can be used without compromising line output or efficiency.

Specifically, Regina DK products can **operate with little or no lubrication** which:

- Saves the cost of lubrication and other product inputs
- Creates a cleaner, safer environment
- Minimizes or eliminates dust on scanned conveyed product

Regina DK products have already been proven to be suitable and successful in the following areas:

- Soft Drinks/Bottled Water
- Glass Manufacturing
- Brewery
- Pet and Baby Foods
- Pharmaceutical
- Dairy

Additionally, Regina DK works well conveying all types of containers such as bottles, glass, aluminum, metal can, and wax paper board.

DK material is exclusive to Regina. To learn more and to see if DK products may be right for your next conveyor belting upgrade, then please contact Frank May regarding your specific needs. Frank can be reached at 513-621-9050 or fmay@cbtcompany.com.
