

Up-Coming Events

Rockwell Automation Presents:

Kinetix on Tour

Join us as we show you the benefits of Kinetix Integrated Motion with this **Hands-on Opportunity**.

We'll make sure you meet challenging objectives by working through a number of different labs including:

- Kinetix Integrated Motion
- Motion Control with CompactLogix
- Safety with Servos
- Phase Manager
- Power Programming

Call your CBT representative today for more information!!

Is your Air Pressure accurate for Precision Applications?

Now you can accurately control your pneumatic pressure requirements by using **SMC's digital pressure sensor** combined with the **ITV series Electro-Pneumatic Pressure Regulator**. SMC's regulator can precisely control the air flow you need for your specific application with no fluctuations. You program the amount of air pressure needed and the output pressure will be equal to your input. Precise outputs help to **reduce energy costs** because you are not wasting unnecessary air.

Electro-Pneumatic Pressure Regulators combined with SMC's digital sensors allow you to choose settings according to your application requirements. These sensors encompass a red/green LED screen so abnormal conditions can be displayed at a glance. Information can then be transferred into a PLC if need be.

These types of proportional regulators are often used in conjunction with a cylinder to **regulate tension** on conveyor belts, paper mill webs, paper rolls for printing presses and much more. SMC's regulator can also ensure the accuracy on precision grinders to maintain precise pressure on a work piece during the grinding operations.

Take control of your air pressure, design a pneumatic pressure regulator into your application today!!

Financial Tip:

Set Goals for Building your Wealth

Building wealth isn't a Sprint, it's a marathon! One of your biggest challenges is staying motivated and on track. That means establishing goals and monitoring your progress. You are only going to get excited about saving your money if it's for something of importance to you. Money saving experts suggest you set short, medium and long term goals then tweak the plan as required.
